

App name: CheckList

This application allows the user to edit a checklist. The user will be able to add or remove “to do” items from the checklist. There is an empty checkbox next to each “to do” item in a checklist that the user can check off by touching the checkbox to indicate the item in the checklist is completed. The user will also be able to uncheck a checkbox as well.

Application Architecture:

- Add item button(s): will add a todo item and checkbox to the checklist.
- Remove item button(s): will remove a todo item and checkbox from the checklist
- Checkbox('s): appear next to each created todo item
- Text: editable text for each todo item.
 - Ex: user could type “walk the dog” or “do the laundry”
